

Introducing  
the GEM  
all-electric  
vehicle from  
DaimlerChrysler

# GEM

## Neighborhood Electric Vehicles

A new concept in community transportation, fun and practical GEM offers an exciting new way to get around town...for just pennies per mile!

It's perfect for those short trips you make every day to the market, to downtown, or to school...trips that simply don't require a full feature, full size vehicle. In a work situation, the GEM can quietly function in virtually any environment including indoors, because it has no emissions.

Designed and built to meet all federal safety regulations by a subsidiary of the DaimlerChrysler Corporation, the GEM

neighborhood electric vehicle has a top speed of 25 mph and the ability to drive on roads with posted speed limits of 35 mph or less. Its minivan-like driving height enhances safety while its compact size makes parking and maneuvering a breeze.

The GEM is surprisingly affordable. Combined with low operation cost and minimal maintenance, it's a package that's hard to resist. Six brilliant colors and a variety of functional option packages allow customizing a GEM to fit your needs and tastes.
