

UIG specializes in these areas of expertise:

- Oil and Gas Process and Production Equipment
- Chemical Storage and Handling
- Engineered Products
- Steel Tank and Structures
- Liquid Storage Systems
- Container Handling Equipment
- Grain Storage and Handling Terminals
- Waste Water and Sewage
- Steel and Pipe Fabrication
- Cathodic Protection Services
- Water Purification and R/O
- Offshore Construction Services
- Design and Supply of Port Facilities

United Industries Group, Inc. Expertise

For over 40 years we have provided storage solutions for the oil and gas industries, reservoirs and standpipes for water storage, pressure vessels and silos for agricultural and chemical processes.

UIG's is a global supplier of tanks to areas as far away and diverse as Alaska and Saudi Arabia. Your project is managed by a comprehensive team of professionals providing continuity across every step of the project: design, procurement, fabrication, delivery and site erection. While on-site, UIG can supply erection crews or use local labor managed by UIG supervisors.

UIG produces a complete range of shop fabricated and field erected storage tanks and has a fabrication facility close to your site to reduce transportation costs. Fabrication facilities are available for stainless steel, titanium and other exotic materials, in addition to the production of standard carbon steel tanks.

Areas of expertise include the design and fabrication of wastewater and sewage treatment tanks, aeration equipment, clarifiers, filters, air diffusers and the supply of a complete range of ancillary equipment required in a treatment plant.

For port facilities, UIG offers not only the storage tanks but conveying systems, loaders and unloaders, weighing and bagging equipment for dry products and the appropriate equipment for the storage and handling of oil, petroleum and chemical products.

To provide you with a single point supplier, UIG provides both the standard tank accessories and any additional item such as valves, instrumentation and controls (SCADA), cathodic protection systems, insulation, mixers, heaters or any other item that is needed to complete your project. In addition to UIG's standard coatings, your tanks may be blasted and coated to meet your projects specific requirements.

Also included in UIG's capabilities are floating roof tanks, geodesic dome roofs, below grade and elevated tanks with capacities over 12 million US Gallons.
