

Introducing AssetTrak

The Asset Management Software

A ssetTrak runs on any Windows platform PC. The client portion uses self-explanatory "tabs and sub-tabs" to divide the software into main logical functions such as asset administration, importing/exporting of files to/from the PC/portable data collecting device, fixed format reports, and initial set up parameters. Multiple warehouses can be managed and AssetTrak even includes a simple 'work order' module allowing assets to be assigned a 'repair ticket' for subsequent processing.

S upports various models of the most popular DOS compliant data collection terminals in batch mode. Terminals can be optionally fitted with either high visibility or long range optics depending on asset scanning environment and various choices of memory storage depending on asset volume requirements.

S erver module runs on a local or remote connected PC and is compatible with any ODBC compatible database (Access, Sequel Server, Oracle, etc.).

E ach package can support unlimited copies of the client module. Software and hardware pricing is dependent on the number of concurrent users, "download stations", and actual portable terminals used in the system.

T racking your assets has never been easier. DataGear owns AssetTrak, so implementing new features is not difficult or expensive. Provide us with your requirements and if necessary we will propose a new configuration after you have

REPORTS

Overview

Where is it? Who was the last person who had it? When was the last time it was serviced? Can you answer these questions about your assets without a computer program? Because there is so much information to collect about company assets, doing it on paper is no longer an option. The need to be able to find information about what the company owns, who has it, and when it was last serviced or accounted for is vital.

AssetTrak will allow you to answer these questions quickly and accurately. You will no longer need to estimate how many assets you have, what you think they cost, or when was the last time they were serviced.

AssetTrak is a simple to use software program that will allow you and your employees to track your assets and maintain vital information about them. This help manual will guide you through the installation, configuration, and use of this software.
