

## Maximizing the Benefits from Your Secure32 Product

Secure32 has helped thousands of companies like yours print checks and other accounting documents reliably, accurately and with complete security. With recent enhancements, the industry's best laser check printing solution is better than ever!

### Introducing Secure32 Business Edition (BE)

Secure32 has now become a suite of solutions providing Office, Business and Enterprise Editions. As a Secure32 support customer, you are entitled to receive a Business Edition upgrade at no charge, enabling you to take advantage of several new enhancements that include:

**Improved User Interface** – The user interface for Business Edition is crisper, cleaner and easier to navigate.

*New and improved, Business Edition's Command Center is clean and intuitive.*

**Take Advantage of Multiple Printers** – Secure32 Business Edition makes it easy to route specialized print runs to different printers.

Secure32 BE printer options can be set to direct payroll runs to specific printer, while accounts payable jobs are channeled to another.

### Advanced Capabilities Now Available

1. ACH Payments
2. Email and Fax Notifications
3. Positive Pay Fraud Prevention
4. On-Demand Check Printing

Optional Secure32 BE modules offer advanced functionality to make your payment processes even more efficient. Through these functional enhancements, you can further reduce payment costs, accelerate payment speed, reduce the risk of fraud and improve communication to your employees and trading partners.

### Business Edition: Modules Available

**ACH Payments** – A major enhancement to Secure32 Business Edition empowers your company to make payments electronically, reducing payment costs. Intuitive setup screens make it easy to create ACH compliant files for direct routing to your bank.

*It's easy to configure the information for a company designated for ACH payment*

**Email and Fax Notification** – With Business Edition you can create notifications that can be sent as PDF files containing fixed or variable graphics. Custom designed notifications can be sent automatically, triggered by user defined payment activities. Applications utilizing this powerful feature include automated alerts to trading partners whenever checks have been produced; or, an email notification generated and sent to employees when payroll payments via ACH have been issued. These notifications can be sent via any fax server capable of opening and transmitting PDF attachments.

**Modules Available** (continued)

**Use Positive Pay to Reduce Fraud –**

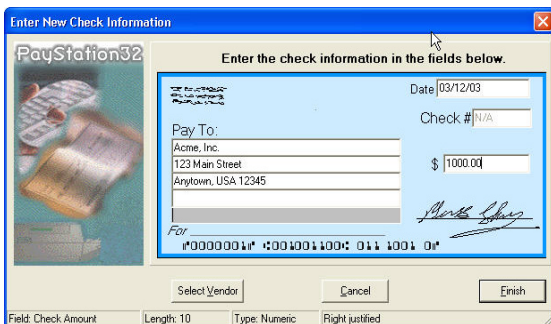

Producing large numbers of checks can put your business at serious risk for fraud. Your bank may offer a Positive Pay service to deter fraud by honoring only the checks that you list on a required check registry issued to the bank.

The Payformance Positive Pay module is designed to generate issue files meeting your bank’s standardized Positive Pay issue file requirements.

**PayStation Prints On-Demand Checks –**

Generating checks on the spot to meet an unexpected or emergency need outside of a typical check run can be a frustrating task. Often, your accounting system will not allow doing so without printing all of the checks entered in the system.

Secure32’s PayStation module was designed to meet this common situation through a simple user interface. Simply enter the required check information into the Secure32 PayStation module, and a check immediately prints from the system.

*With PayStation, you can produce individual checks needed for reimbursements, deliveries, and other on-demand checks*

**More Capabilities to Leverage**

Secure32 Business Edition includes all of the functionality you have come to rely on in your current Secure32 product.

When you request an upgrade to enhanced Business Edition, be sure to leverage the full power of your check printing solution by using the following core capabilities:

**Manage Multiple Accounts with Ease –** Processing records from multiple checking accounts can be a problem. Many companies generate separate files for each accounting document, which is inefficient for all involved.

Secure32 Business Edition has the ability to process one file, containing records from multiple accounts, using a single application. The software switches checkbooks as needed for each accounting document and inserts the correct MICR line. Secure32 BE can even distinguish which paper tray to use for each account.

**Gain Efficiencies with Sorting –** With the Secure32 Business Edition’s **sort** module, you’ll have new flexibility in configuring which way your checks are sorted based on any piece of check information. For example, you could sort your checks by dollar amount and make it easier for a Supervisor to hand sign large checks.

**How to Receive Your Free Copy of Secure32 Business Edition**

As a current Secure32 customer on support, Business Edition is yours for the asking! Call Payformance today at 800-733-0908 to request your free copy!

At the same time, be sure to discuss the advanced capabilities available for Business Edition to help make your payments processes even more efficient.

**Explore the Secure32 Software Family**

**Secure32 Business Edition (BE)** offers a complete, advanced laser check printing solution capable of managing any document volume at a single location.

Should your company require a secure solution for distributing check printing across multiple remote locations, **Secure32 Enterprise Edition (EE)** offers the power and flexibility designed to meet this need.

**Secure32 Office Edition (OE)** is designed for print production at a single location. Office Edition contains the same levels of security and control, but is designed for smaller organizations that do not require the more advanced capabilities of the Business Edition.
