

# FailSafe Air Safety Systems™

## FASS™ Mobile Containment Systems

### **Bio-terrorism Ready:**

- ▶ *air purification for collective protection in biological, nuclear or chemically contaminated environments\**
- ▶ *may eliminate the need for individual protective equipment such as masks and suits*
- ▶ *acts as a portable decontamination system*
- ▶ *may be used in a variety of applications including buildings, ships, planes, shelters, vehicles*
- ▶ *quick change prefilter, germicidal UV light and ozone generator; part of a patented air safety process*

**Portable. Simple. Dependable.** Designed to capture, contain and neutralize airborne and surface resident agents ranging from nuisances -- such as dust, pollen and odor, to toxic and deadly -- such as anthrax, smallpox, sarin gas, TB and other biohazard/bio-terrorism problems.

### **HEPA AND CHARCOAL FILTERS**

The HEPA filter, rated 99.99% efficiency at 0.3 microns, exceeds EPA standards for asbestos, lead paint and pesticides in environmental clean-up projects. A major part of the design is rapid change pre-filters for charcoal or sorbant material dictated by response needs. Multiple pre-filters can be used in tandem when there's a tougher odor or fume clean-up required.

*\*Based on product configuration*

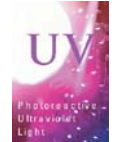

# FailSafe Air Safety Systems™

## FASS™ Mobile Containment

The versatile **FASS Mobile Containment Systems** are highly portable air scrubbers that can remove odors and clear airborne contaminants.
