Power Base

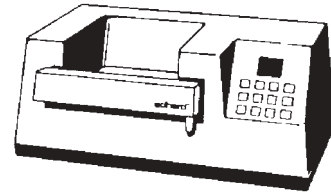

Filler Unit

**Fill Donuts, Eclairs, Munchkins, Cupcakes, Cream Puffs and Such**

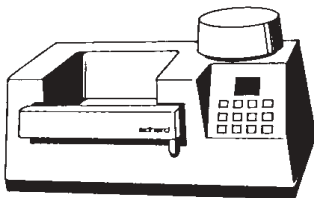

**Power Base**

The Power Base is a totally enclosed, self-contained Volumetric metering Device, extremely functional and easy to clean. The latest solid state technology insures reliability and ease of operation; thereby increasing productivity and profit, while enhancing appearance, and assuring uniformity of the finished product.

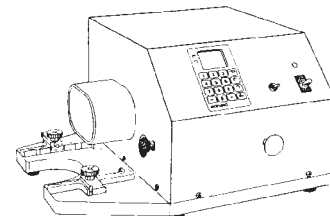

Amount to be dispensed is easily entered into the system's memory via the digital Entry Keypad, thus insuring accuracy and eliminating waste. Maximum amount dispensed is 16 or 32 ounces per cycle. At the end of each metering cycle the pump reverses to eliminate dripping.

Mixers / Spiral

Spiral Mixer

This reliable spiral mixer features a belt driven transmission and two motors, two stage for the spiral and one for the bowl. This unit is noiseless and practically maintenance free. Perfect kneading can be had with small quantities of dough or with the maximum mixer capacity. The totally enclosed bowl ensures emission free operation.

The unique design of the spiral and its coordinated speed ratio with the bowl ensure quick working times and large output for the

kneading phase. You will attain maximum oxygenation of flour and, consequently maximum water absorption. This unit also insures rising of the dough during kneading, which reduces rest time required. Dry and soft dough can be easily handled during subsequent operations.

Ovens / Convection

Convection Oven w/Steam

This workhorse handles a wide variety of products. Breads, rolls, muffins, cookies, brownies, croissants, danish, bagels, pies and cakes all benefit from the uniform baking feature, which eliminates the need to rotate trays. Units may be stacked to gain maximum production from minimal space. Heavy duty 16 gauge stainless steel construction makes this a true workhorse, well suited for any commercial use. Oven light and self steam generation are standard. Tray spacing is 3.5". Custom configurations are available.

# 1-877-363-6662

## PREP AND GLAZE

SOME PANS ARE AVAILABLE PLAIN OR WITH A FDA-ACCEPTED SILICONE BAKERY RELEASE COATING CALLED PREP & GLAZE (P&G). GLAZE IS ACTUALLY A TWO PART PROCESS. THE FIRST PART OF THE PROCESS IS CALLED PREP.

THIS STEP PREPARES THE PAN'S SURFACES , ALLOWING THE SILICONE TO ADHERE TIGHTLY TO THE PAN'S SURFACES. THE SECOND STEP (GLAZE) IS THE ACTUAL APPLICATION OF THE CLEAR SILICONE COATING. THIS COATING HELPS BAKED PRODUCTS RELEASE FROM THE PAN EASILY WHEN PANS ARE NEW. AS THE GLAZE WEARS OFF, THE PANS MUST BE OILED MORE AND MORE FREQUENTLY UNTIL FINALLY THE GLAZE IS TOTALLY WORN OFF AND THE PAN MUST BE OILED EVERY TIME IT IS USED. INDEPENDENT COMMERCIAL REGLAZING BUSINESSES ARE AVAILABLE TO CLEAN AND REGLAZE USED BAKERY PANS. ASK YOUR INEQCO REPRESENTATIVE FOR THE LOCATION NEAREST TO YOU.

**We accept Visa, Mastercard,  
American Express, and Discover**

**Price Changes:**

In the event of market Fluctuations, our prices are subject to change without notice

## GLAZED BAKEWARE HANDLING AND CLEANING GUIDELINES

All pans with Prep & Glaze have a silicone glaze coating applied to the surface of the pan to aid in the removal of baked products. Because this silicone glaze is not a permanent coating, the use and care suggestions listed below should be followed in order to prolong the life of the glaze.

### DAILY USE

**1. Lubricate pans.** Prior to panning the products to be baked, apply a pan lubricant or spray to the baking area(s) of each pan. Brand new or newly reglazed pans generally do not require as much lubrication as older pans. Brand new glazed pans work best after first lubricating the pan's baking contact surfaces and then baking for ten minutes, without any product in the pan.

**2. Depan products quickly.** Baked products should be depanned immediately after baking while the pan is still hot or warm. If you allow baked products to cool in the pan, steam from the product will penetrate the glaze. This may cause glaze lifting or premature glaze failure and can actually result in damage to the pan's surface.

3. Do not scratch or scrape pans. Do not use metal utensils or other objects that could scratch the glaze. Deep scratches may cause surface corrosion on the pan.

### DAILY CLEANING

**1. Clean as you go.** Usually, just wiping still-warm pans with a clean towel is all that is necessary. Sometimes it helps to apply a little pan lubricant or non-stick spray to the towel first. Avoid pan washing whenever possible,

**2. Wash with mild soap & water only when absolutely necessary.** Only mild soap and water should be used when washing commercial baking pans. Do not use harsh cleaners, highly alkaline detergents or abrasive scrubbing pads. Use of these materials will damage the glaze and cause the glaze to fail prematurely. Thoroughly dry all pans immediately after washing - warm ovens work well. After every washing, reseason baking surface(s) immediately with pan lubricant or spray and bake at 350F for ten minutes. Follow pan storage guidelines.

**NOTE: Do not soak pans in water. Do not wash in automatic dishwashers.**

**3. Once dry, store pans upside down.** Do not nest pans immediately after towel drying. Keep pans away from moist and humid storage environments. The best storage areas are dry, warm storage areas or still-warm ovens.

## THE MOST IMPORTANT SAFETY TIP IS PROPER MAINTENANCE ITSELF

Users are responsible for the proper operation and maintenance of the manual material handling equipment they use. Some equipment will quickly become damaged and unsafe if abused or subjected to improper demands. If equipment is regularly maintained and not abused, you will get the maximum safety and service performance from your casters. \*Do not overload equipment \*Do not drop heavy loads on carts or trucks \*Do not use at high speeds These uses create severe impact and shock loads that may lead to wheel and equipment failure.

## FRAMES AND FASTENERS

Periodically turn the equipment on its end or side and check the following: \*Look for broken welds or deck boards. \*Tighten loose bolts and nuts. \*Look for frame distortion caused by overloads and impact loads. Distorted frames can lead to wheel failure by placing disproportionate loads on one or two casters. \*If casters are stem types (bolted or riveted in place), make certain that the legs of the equipment are not bent, and that mounting bolts are securely fastened. \*Always use lock-nuts or lock washers in mounting casters. \*Be sure casters with expanding applicators in tubular equipment are held firmly in place.

## LUBRICATION

Lubrication is essential. The lubrication schedule depends on your specific application. Normal conditions may warrant lubrication every six months, but monthly lubrication may be necessary for applications in wet or corrosive environments. Lubrication may be required after each cart washing. Special high temperature, water-resistant lubricants must be used for these applications. Ineqco can provide stainless steel casters that require less maintenance in frequent cart-washing applications.

Regular lubrication adds to the life of wheel and swivel bearings. A little lube spillover to friction points on the wheel hub, thrust washer, and leg surface of straight roller bearing systems reduces drag and improves rollability.

## WHEELS

Check wheels for visible tread wear. Flat spots may indicate accumulation of foreign material, such as string or thread, which can cause the wheel to bind. Remove the axle bolt and nut. Clean out foreign material and check internal components for wear or failure. Re-assemble if the parts are not damaged. Thread guards may be installed to delay build-up if foreign material is a continuing problem.

Loose casters and frozen wheels can also cause flat spots. Proper maintenance, especially tightening of bolts, proper lubrication, and replacement of damaged casters will enhance equipment rollability and tracking performance.

Badly worn or "chunked out" rubber tires can also cause erratic steering, bumping, load shifting, and floor damage. Replacement wheels and bearings should be kept on hand to reduce costly downtime.

After wheels have been inspected and repaired, be sure the axle nut is properly tightened. Use lock washers or locknuts on all axles. If the caster axle is loose, tighten immediately. The wheel may be damaged or lock up if it is cocked in the caster horn.

## CASTERS

Check the swivel assembly to see if there is excessive play due to wear. If the swivel assembly is loose, it is advisable to replace it (fork or rig) or the entire caster. If the caster has a king bolt and nut, make sure it is fastened securely. If the swivel does not turn freely, check for corrosion or dirt binding the raceways. Again, it may be necessary to replace the swivel assembly or the entire caster.

If the equipment has rigid or stationary casters at one end, make sure that the caster horns are not bent or distorted.

# 1-877-363-6662

**GLOSSARY OF CASTER TERMINOLOGY**

**BOLT HOLE SPACING -**

The distance between top plate bolt hole centers

**CAPACITY -**

Maximum load per wheel based on expected operation (expected maximum load divided by number of wheels)

**CASTER SIZE -**

Same as wheel diameter

**DYNAMIC OR ROLLING LOAD -**

Load on a caster or wheel while in motion

**FORK ASSEMBLY (RIG) -**

The caster assembly without wheel and axle

**MOUNTING (TOP) PLATE -**

The plate at the top of the caster which is bolted or welded to the equipment

**OFFSET -**

Horizontal distance between the centerline of the swivel kingpin and the centerline of the axle; shorter offsets are stronger, longer offsets improve maneuverability.

**RACEWAY -**

Surface on which bearing rollers or balls move

**ROLLABILITY -**

Force required to begin or maintain motion, measured by drawbar pull

**SPANNER BUSHING -**

The fixed sleeve in which the axle runs

**STATIC LOAD -**

Load on a caster or wheel while at rest

**SWIVEL RADIUS -**

Horizontal distance between the centerline of the swivel kingpin and the outside edge of the wheel

**THRUST WASHER -**

The washer between the wheel hub and the inside of the caster leg

**TREAD WIDTH (FACE) -**

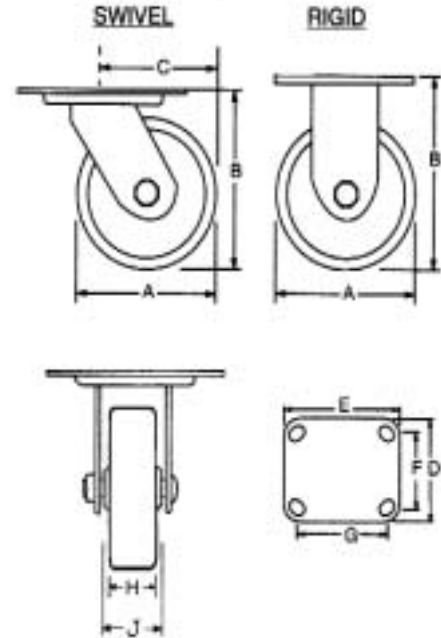

Width of the wheel tread

**CASTER ORDERING GUIDE**

WHEN ORDERING REPLACEMENT CASTERS, PROVIDE AS MANY OF THE FOLLOWING SPECIFICATIONS AS POSSIBLE

**APPENDIX C  
SPECIAL FABRICATION**

Ineqco is currently supplying oven racks for most of the foreign and domestic oven manufacturers. You can order them in knock - down or nesting configuration.

If you need oven racks not listed in our directory, please contact Ineqco at 1-877-363-6662.

## Terms And Conditions

Ineqco Intl LLC, Terms and Conditions of Sale: Product(s) have been sold to the Buyer on these Terms and Conditions of Sale. Acceptance: Buyer's action in acceptance of all of the Terms and Conditions set forth by Ineqco Intl LLC, hereafter referred to as Ineqco. If any of the Buyer's terms are in conflict with these Terms and Conditions of Sale, the terms of Ineqco shall govern, unless buyer's terms are accepted in writing by Ineqco. No verbal agreement or understanding shall in any way modify the Terms and Conditions of Sale contained herein.

**DELIVERY:** Unless otherwise specified, in writing, by Ineqco, all prices are F.O.B. manufacturers warehouse: Transportation will be by method, route and carrier selected by Ineqco. All freight charges will be the responsibility of the buyer. Buyer shall bear (or shall reimburse Ineqco) for all taxes and/or excises or other government charges or levies. Ineqco shall not be liable for delay in or failure of delivery where delivery has been made impossible or impractical by the occurrence of a contingency such as war, intervening government regulations, civil commotion, riot, disorder, strike or other labor stoppage or difficulty, fire, flood, storm, accident, production failure, raw material shortage, transportation failure or act of God. In any event, Ineqco may, at its sole discretion allocate products among buyers. Ineqco's count of goods shipped shall govern except in case of proven error.

**DAMAGED MERCHANDISE:** Our responsibility for shipment ceases with acceptance by carriers. If any goods called for on the Bill of Lading are short or damaged, do not accept them until the freight agent makes a damage notation on your freight bill. Thoroughly inspect the shipment as soon as received- if any concealed loss or damage is discovered, notify your freight agent at once and request an inspection. This is absolutely necessary. Unless you do this, the transportation company will not entertain any claim for loss or damage. If the agent will not make an inspection, then; you should make an affidavit that you notified him (on a certain date) and he failed to do so. This, with other papers, will properly support your claim.

**CLAIMS PROCEDURES:** In no event shall Ineqco be liable on any claim unless written notice of the claim, sent certified mail, return receipt requested, is received by Ineqco within thirty (30) days after delivery. Failure of Buyer to assert claim within such time shall be deemed a waiver by the buyer of all claims with respect to such products. Buyer shall have the right to reject nonconforming products or to make claim for monetary adjustment, or at Ineqco's option, to return nonconforming goods and disputed products to Ineqco but, (1) in no event shall any claim of any kind be greater than the purchase price of the product in respect of which damages are claimed, and (2) in no event may any product be returned to Ineqco without Ineqco's prior written consent. Buyer shall afford Ineqco prompt and reasonable opportunity to inspect all material as to which any claim is made. No claim shall be allowed after the product has been processed in any manner.

**PAYMENTS:** Terms are 50% deposit with order balance prior to or on delivery unless previous credit terms are arranged. Interest shall be charged at the rate of 1.75% per month, or maximum allowed by law, whichever is greater, from the due date on all past due accounts. If, in the judgment of Ineqco, the financial credit of the Buyer at any time does not justify continuance of production or shipment of the product based on payment terms herein specified, Ineqco may require full or partial payment prior to completion or shipment.

**INDEMNITY:** In addition to each and every item and condition herein which refers to some type of indemnity requirement of Buyer in favor of Ineqco, Buyer shall exculpate, defend indemnity and hold harmless Ineqco for all losses, damages or liabilities resulting. Ineqco warrants to the original purchaser that its equipment will be free from defects in the material and/or workmanship for the period of one (1) year from the date of original invoice, provided the equipment is reported installed on a registration card and returned to Ineqco. The purchaser is responsible for; having the equipment properly installed, operated under normal conditions with proper supervision and the performance of periodic preventive maintenance. Ineqco obligation under this warranty shall be replacement or repair of defective parts within the warranty period. After thorough examination, the decision of Ineqco's service department shall be final. Any defective parts to be repaired or replaced must be returned to Ineqco within thirty (30) days of installation of the replacement part, transportation charges are to be prepaid, and the parts must be properly packaged and tagged.
