## Product Warranty

All hardware Link Systems are warranted for **one (1) year** from date of shipment. **Extended warranties can be purchased** at time of purchase. This covers all labor, material and shipping cost from ACS's facilities.

The software Link Systems have upgrades available on a periodic basis at a **nominal cost.** Program **corrections are free** and available **via the Web.**

For explicit warranty, ask your sales person for details. 1-800-237-5465

## Support/Service

The office hours are from **8:00 AM till 5:00 PM**, Monday thru Friday EST. Your call is answered by an operator during the day with voice mail available after hours.

All **telephone technical support is free** at all times. Our staff is always available to reply to any of your concerns.

## Sales Staff

Our sales staff will provide you with any Link System **quotes,** configuration drawings, **demo systems,** special applications at no charge. They are available during the normal working hours as noted above. This experienced staff can be your **'one stop' shop** for all of your Link System needs.

## GSA Schedule

For all the government entities that purchase direct, we have those **related products on the GSA schedule.** Ask our sales staff for details.

## Shipping/Delivery Schedule

Once we have a Purchase Order and other pertinent information, we will ship any Link System within **(10) working days or less.**

**UPS** is the shipping carrier used by ACS. **Other carriers are available** if requested by the customer. Shipment is FOB-ACS unless otherwise stated.

## System Requirements

— *Hardware* —

Platform independent, no LAN required

— *Hybrid — Software — Wireless* —

Operating System—Windows 98, ME, NT, 2000, XP

| | | |
|---|---|---|
| Hardware— | Processor | Pentium III, 500 Mhz |
| | RAM | 128 Mbytes |
| | Hard Drive | 10 Mbytes for Application |
| | | 40 Mbytes for .Net Framework |

# System Details/Configurations

♦ There are **four** basic types of Link System configurations. They are:

1. **All hardware** —Video, Audio, Keyboard & Mouse(K&M) and Response System—all real-time.

2. **Hybrid** — Video & Audio is hardware (real-time), K&M & Response System is software.

3. **All Software** — Video, Audio, K&M and Response System. Uses the existing LAN.

4. **Wireless** — All software Video, Audio, K&M and Response System. Uses a provided LAN.

♦ The Mobile Console is used in **all** four configurations with the console operated in a **connected or mobile** environment.

♦ Any system can be purchased with most features. For example, you can purchase Video with the Transmit and Blank features only and upgrade to a full-featured Link System, simply by purchasing the **new feature at any time** and **add it in the field.**

♦ The Hybrid, Software and Wireless systems **utilize** the **student keyboard and mouse**—additional hardware is not required at the student station. The audio comes from the computer sound system.

♦ The Student Attendance, Time & Tracking (SATT) program is a software system that can be added to any Link System or stand-alone. The control and report generation is on the Instructor's computer. **Attendance and student Testing** is **Tracked** by the system. There is an authoring test generation section with auto-test generation and grading with a real-time 'Status Board' for instructor observation. For more info, ask for a White Paper.

♦ The Link Stylus is software that can be added to any Link System or stand-alone. It is a **presentation tool** that can overlay any window, DVD or CD image. Any marked up image with the Stylus can be saved for any type of presentation.

♦ The Link Systems can be configured into many configurations. **Dual classrooms** can be configured into one classroom automatically with the AutoSwitch. **Multiple instructors** with multiple monitors operate automatically from multiple 'Mobile' consoles.

♦ The new Controller has **real-time diagnostic** LEDs for instant system feedback. It also has been reduced in size, perfect for the Console.
