

## Our Mission Statement

- *We will be the world-class source for restoration of adhesive application equipment.*
- *We will provide value to our customers by reducing operating and maintenance costs and extending the life of their equipment investments.*
- *We will provide a safe, clean working environment with advancement opportunities for our employees.*

"Our goal is to convince a generation to outsource its adhesive application equipment maintenance requirements to Newco."

Gerry Hicks, President

# THE SOURCE FOR ALL YOUR HOT MELT ADHESIVE SYSTEM MAINTENANCE REQUIREMENTS!

*People in the know use Newco!*

Newco Enterprises Inc. restores and cleans Hot Melt Adhesive Application Equipment to "like new" condition at a fraction of the original cost. We rebuild all equipment, by all manufacturers.

We totally disassemble tanks and strip and repaint the frame. All traces of adhesive are removed by chemical and physical means, and all surfaces that are ever exposed to adhesive (tank, reservoir, grid, etc.) are recoated with new release coating. The tanks are reassembled using all new seals and gaskets, and the units are then tested and pressure checked for one hour at 1200 psi.

Guns (applicators) are also totally disassembled, cleaned to "like new" condition, and reassembled using new seals, fittings and o-rings. Modules are either rebuilt or replaced with new ones. All heaters and sensors are checked and replaced if defective.

We also completely rebuild all pumps, using new seals and gaskets, plus we clean and recondition all other items such as filter screens, filter bung assemblies, nozzles, and so forth. And, we will clean and refurbish hoses (flexlines) of any diameter and length.

Your equipment arrives back at your plant in "like new" condition, is guaranteed to perform like it did when you bought it new — and all at a fraction of its original cost — usually less than half!!

Newco Enterprises is located in Fairburn, Georgia, about 20 minutes south of the Atlanta airport. We have a large base of loyal, satisfied customers, and we moved into our new 13,325 square foot plant in December of 2001 in order to meet the continued demand for our rebuilding services.
