Cargobody USA features new lineup of instant truck bodies for industry

Cargobody has introduced an exclusive and unique newly patented product line of reusable, ready-to-go, universal slip-on and removable truck bodies for pick-up trucks.

This product is designed to satisfy the requirements of many who have a need to tailor certain fleet vehicles and other mobile equipment to suit their industry needs.

These requirements call for vehicles to sometimes be configured differently than what the auto and truck manufacturers offer from their factories. As such, some operators who use cargo vans, also referred to as utility vans, will appreciate and benefit from this new product.

The Cargobody product is truly unique. It is a slip-on, multi-purpose, light weight, fiberglass body for pickup

trucks that universally fits GM, Ford, and Dodge vehicles. This is a proven high quality commercial product that substitutes the usual need for a bolted-on or welded, special or general purpose truck body. Some examples include telephone service trucks, construction, industrial ambulances and many other special type vehicles. This product has already gained a high level of acceptance in a number of different industries in the utility, construction, trades, and military markets.

A Cargobody can outlast numerous vehicles, making it an asset, while providing an excellent return on investment, even after many years of use. Considerable savings are also realized because there is no need to repeatedly spend time and money to outfit future vehicles when

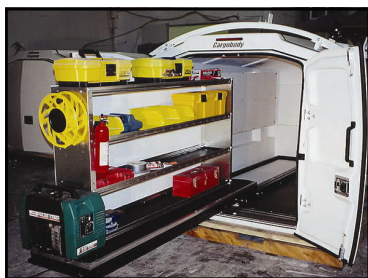

they are acquired. Some of the features include its ability to be quickly shifted from one pickup truck to another by just one person in just minutes. This is useful when a primary host is removed from service due to routine or unscheduled maintenance. Even a rental vehicle can be used. This provides the operator with their own Cargobody to carry out scheduled jobs, with the familiarity and organization of his or her supplies, materials and equipment. Which they are personally reliant on.

Customized factory ready packages to suit special needs

Multiple Cargobody units can offer the operator the diversity of numerous differently equipped capsules ready for quick service. They are ready to be assigned to any specialized task and customized to suit the individual need of the operator. More examples of Cargobody's factory models are:

- Tradesmen
- Industry
- Emergency & Military
- General Field Service
- Explosives & Blasting
- Mobile Lab
- Mobile Workshop
- Field Troubleshooting
- Mobile Office
- First Aid / Ambulance
- Field Coffee Canteen
- Mobile Supply Storeroom
- Sleeping Quarters (Camper) and more ...

How & Why is Cargobody Unique

Cargobody comes equipped from the factory in any manner and can be shipped to any destination for immediate use. It can then be installed in just minutes without drilling any holes or the use of nuts and bolts. That's right - no nuts and bolts! This is made possible by its unique built-in lock-down system that engages the Cargobody to the host vehicle in just minutes.

Thus providing valuable transferability of the Car-

gobody even when loaded. Operators may have certain seasonal or limited requirements. In some cases, a Cargobody capsule can be equipped as required and sit in a position of readiness without the investment and servicing of a dedicated vehicle. Unlike vehicles, there is no oil to change or batteries to charge, etc. The Cargobody is maintenance free and always ready for use.

Because the Cargobody can be quickly and easily installed by just one person you have the ability to gain greater utilization of fleet vehicles. At the same time you will not compromise your needs, thus making the Cargobody an outstanding unique asset. Factory ready for quick and easy installment through its patented features makes the Cargobody unique.

Save on vehicle costs & maintenance while improving cash flow

Optimizing Life Cycle Value

The Cargobody provides the operator the ability to keep fleet vehicles at an optimum number, while at all times fulfilling all required mobile needs. Say you are a fleet operator and your requirements call for a temporary change (increase or decrease) by a certain percentage of number of vehicles. The change is expected to last for

a short period of time. With a Cargobody in use, your only requirement is a host vehicle. This is now the easy part! There is no need to modify the host vehicles. You can satisfy the vehicle needs by short-term rental or lease; daily, weekly, or monthly as required. You may even consider subcontracting to independents as they can host your

fully equipped Cargobody on their vehicle to satisfy requirements at hand, while still maintaining corporate image with a consistent appearance. Company name, markings and/or logos can be placed on the Cargobody upon request. These new features for fleet operations, deliver a new fully optimized life cycle value of vehicle investment.

Better Fleet Investment

The new ability of multiple Cargobody's can offer a greater diversity with numerous differently equipped capsules ready to be assigned to any specialized task and optimize fleet vehicle requirements. This enables the highest vehicle utilization, therefore maximizing return

on vehicle and related asset investment. Cargobody can be moved from vehicle to vehicle without showing any historical tell-tale signs on the vehicle of its use. Thus the vehicle's resale value becomes the highest possible when vehicle replacement comes due.

It can be loaded as required by the operator then mounted onto a regular pickup truck within minutes. Because of this new diversity, Cargobody is a better investment.

Better amortization value & higher vehicle resale value

The Cargobody is designed and manufactured to out-last numerous fleet vehicle replacements. Vans or other vehicles are modified to go into service, which causes their future resale value to be significantly compromised. The usual result is a low asset recapture rate for that type of vehicle. This can be a serious loss to the operator, especially when new replacement vehicles must then undergo the same retrofitting all

over again. The Cargobody needs only to be outfitted once for the operator which eliminates the repeated need to re-equip new or replacement vehicles. The Cargobody is designed to out last many vehicles, while maximizing utilization and recapturing the vehicle's capital costs. The Cargobody is a wise and economical choice.

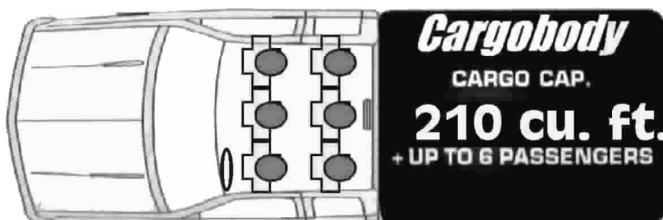

Greater Benefits Compared to Typical Cargo Vans

- 4WD Ready. Delivers new operational advantages.
- One time retrofit of roof racks, shelving, special equipment, etc.
- Repeat use of special service configurations on other future vehicles.
- Custom interior packages delivered ready for service on any truck.
- Reusable and easily transferable after vehicle is worn out or up for replacement.
- Pick-up trucks have a greater and better resale market.
- Cargobody will outlast numerous vehicles .
- The Cargobody can be transferred to a rental in the event that a vehicle is out of service.
- No down time due to service problems.
- Operator always has own tools & equipment regardless of host vehicle.
- Pick-up Trucks have seating for 3 to 6 and quieter cab configurations.
- Better climate control of heat or A/C
- In the case of an independent operator, new clean comfortable seating for family use.
- Ability to replace or upgrade vehicles is more diverse.
- Professional company image through logos & lettering that's not lost in sale of truck.
- Driver is safer in the case of a crash as all tools and equipment are contained in rear.
- Pickup truck driver compartments are quieter and more comfortable.
- A better operating environment can deliver increased safety and productivity.
- No need for cargo divider as cargo and equipment are contained in the Cargobody.
- Greater resistance against intrusion and theft.
- **Greater life-cycle value**

*More Cargo
More Diversity
More Profitability*

Cargobody Saves 1/3 of Vehicle Operational Costs and Delivers New flexibility & Vehicle Diversity than other choices

If you are an independent operator, assume for a moment that a van or service truck operates only Monday to Friday and it sits idle on weekends and holidays. Generally the van or service vehicle isn't used for personal reasons because it's too dusty, dirty and noisy for personal use. The result may be that 1/3 of one investment by way of insurance tags, repairs, vehicle payments and other maintenance costs is of no value to the operator. This is essentially a loss

that cannot be recaptured with that type of vehicle.

However, the Cargobody configuration on a pick-up truck (with opt. jacks) can offer the operator a full service vehicle that is both functional for both work tasks and other use.

The Cargobody on a pick-up provides the operator a quiet comfortable passenger compartment for personal use while work tools equipment and materials are self contained in the

rear. If the operator desires, he can take advantage of the quick and easy on/off removal feature to haul a fifth wheel trailer, camper, boat, snowmobiles, etc. without the need for an additional vehicle.

In some cases the Cargobody/Pick-up Truck combination may reduce the need for other vehicles, creating a substantial savings in operational vehicle costs.
