

Pocket Form Isolator™

Permanent Form for Column Isolations

FEATURES & BENEFITS

The Pocket Form Isolator™ is a permanent, stay-in-place, form for isolation of the column foundation, base plate and bolts from the concrete slab. It is the most accurate, cost effective way to isolate the slab at column locations.

Features / Benefits

- A perfectly formed column isolation shape is guaranteed every time with the Pocket Form Isolator™, installed in a fraction of the time required with conventional alternative forming methods.
- Eliminates all removal and disposal of temporary form materials, providing a faster, cleaner and safer installation.
- Same day pouring of formed block outs is possible if column is erected prior to slab placement.
- Pocket Form Isolator is assembled, leveled and anchored in a fraction of the time spent erecting wood or cardboard forms.
- Individual sections can be used to create two or three sided isolations at perimeter walls or corners.
- Easily drill or cut Pocket Form Isolator™ for penetration of piping, conduit or electrical wiring, creating excellent utility or refrigeration line pull boxes.
- The Pocket Form Isolator™ is made of light-

weight, high-density polyethylene and is manufactured in either 24" or 28" square sizes, ranging from 8" to 48" in depth.

- Each Pocket Form Isolator™ is individually packaged for a complete installation, including clips, shims, concrete nails and instructions (both English and Spanish).
- Pocket Form Isolator™ is primarily made from recycled materials, adding to the preservation of the environment in which we live.

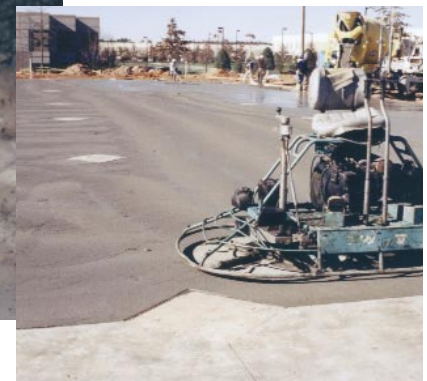

The optional lid allows for:

- Screeding and finishing around and over the Pocket Form Isolator™ without concrete filling the formed void.
- Casting concrete tilt walls over the Pocket Form Isolator™.
- A safer working environment free of dangerous pits in the floor.
- Keeping debris out the isolation area.
