

# Sabre Tubular Structures provided Salmon River Electric Cooperative with excellent customer service.

"Salmon River Electric Cooperative (SREC) chose Sabre weathering steel power poles to replace our woodpecker damaged wood poles on SREC's remote Stanley 69kV/24.9kV feeder. SREC has found that steel poles provide the woodpecker protection, reliability and longevity needed for this inaccessible power line.

Throughout the entire project, Sabre Tubular Structures was great to work with. Sabre's costs were very competitive and the poles are top-notch. Sabre's product manager kept SREC up-to-date on lead times, and the pole deliveries were right in line with what SREC was quoted. Sabre Tubular Structures provided SREC with excellent customer service."
