

SILAS REVEILLE™

REAL WORLD APPLICATION MANAGEMENT

Silas Reveille™ provides proactive, real-time application monitoring and service-level metrics reporting for business applications and their supporting infrastructure components. It provides real-time status of applications, operations and business processes throughout the organization. By monitoring not only the technology but also the application service provided by that technology, Silas Reveille enhances existing conventional management tools. It does all this with a proven, time-to-value proposition that shatters traditional norms.

RAPID IMPLEMENTATION

Silas Reveille™ installs in minutes, is running in hours and delivers results in days. Multiple monitors run from a single-host server and target virtually any platform or service.

"Agentless Monitoring holds the promise of cheaper and easier-to-maintain monitoring technology."

- META Group

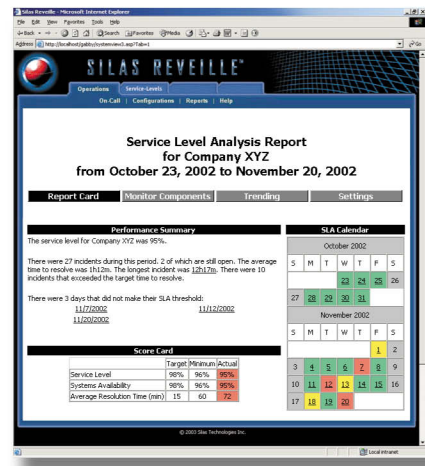

AGENTLESS DESIGN

Silas Reveille avoids the burden of installing software agents on every resource or process being monitored. Without impeding performance, Silas Reveille tests each application and component for viability, ranging from simple availability to actual data integrity.

SERVICE-LEVEL METRICS REPORTING

Silas Reveille provides browser-based access to real-time data, as well as historical data about the operational health of business applications and affiliated resources. Reporting and analysis includes reporting for:

- Service-Level Agreements
- Real-time applications and component status
- Specific application and resource details
- Web site performance

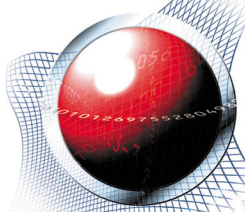

PRACTICAL BUSINESS APPLICATION MANAGEMENT WITH UNBELIEVABLE TIME-TO-VALUE

AGENTLESS REAL-TIME RAPID IMPLEMENTATION

SILAS REVEILLE™

REAL WORLD APPLICATION MANAGEMENT

Silas Reveille™ provides proactive, real-time application monitoring and service-level metrics reporting for business applications and their supporting infrastructure components. Silas Reveille has proven success in monitoring critical applications in healthcare, financial services, retail, communications, government, education, and other industries, as well as across industry segments with highly regarded organizations, such as Captiva Software, IBM and Kodak. Silas Technologies continues to develop new channels for Silas Reveille to optimize industry-specific applications while maintaining our focus on delivering practical management solutions with a time-to-value that shatters traditional norms.

SPANS DIVERSE AND COMPLEX APPLICATIONS

Unlike typical Web-focused services, Silas Reveille provides integrated monitoring of complex business applications through your organization from Web servers to UNIX® boxes, even CICS regions with relational databases on legacy mainframes. Plus, you can easily test inside and outside your firewall for both internal applications and external third-party suppliers.

BROWSER-BASED USER INTERFACE

Silas Reveille delivers service-level metrics information through a graphical, browser-based presentation, enabling both operations and business lines to easily access and clearly understand service-level information.

MATCHES PROBLEMS WITH RESPONSIBLE IT STAFF

Silas Reveille includes robust and integrated support coordination. When a service failure is detected, message-based paging and e-mail automatically inform the relevant support resources. Upon resolution, support resources are notified that the problem has been corrected. Each test can be configured with unique notification and resource parameters.

"We chose Silas Reveille over the competition because it was quick and easy to implement, less expensive, and had a much shorter training curve, but it also is very powerful and can monitor not only our Web site but our entire Web architecture. My executive team believed Silas Technologies was the only company that truly understood our pain and could attack our application management issues head-on."

-Director of Information Systems, Retail Customer
