The demand for "High Nines" availability of electronic information is greater than ever. Commercial companies are continuously adding computing power to meet demands from their customers. Industrial companies continue to automate with more Process Control Systems. The reliability of voice and data communication continues to have a profound impact on the profits of business and the quality of life for individuals and families.

In order to achieve high levels of availability, a strategically designed support systems infrastructure is required for a "mission critical" client. Designing a support system for this type of facility requires a specialized mix of electrical, mechanical, and architectural expertise. Proper design of a support system is essential to minimize down-time of equipment and to provide trouble-free operation of a "mission critical" facility.

TECH SITE understands the special needs of data centers and electronic equipment…..

- raised flooring to dual input power requirements.

- specially designed architectural environments to proper lighting.

- precision cooling to facility monitoring.

These are a few aspects of the design process that *TECH SITE* deals with on a regular basis.

With more than 100 facility projects completed across the nation and abroad, *TECH SITE* has worked with all major computer manufacturers. *TECH SITE* associates include professional engineers, data processing consultants, and construction managers, having many years of experience in the design and construction of facilities that require reliable environmental support systems for "mission critical" clients.

Our clients include organizations and companies within a wide range of industries:

Financial

Governmental

Industrial

Institutional

Insurance

Medical

Utilities

Retail Operations

Telecommunications

Computer Manufacturers/Service

Developer/Building Management

TECH SITE - List of Services

Facilities Program - provides all three phases of a "Turn-Key" project:

Evaluation   - Conceptual Design, and
                            Budgeting.

Engineering   - Design, Analysis, and
                            Detailed Drawings.

Implementation - Turn-Key Construction
                              of the Project.

Site Audit Program- provides critical inspection and documentation of the existing support systems infrastructure.

Post Construction Program- provides appropriate equipment maintenance, process, and documentation support.
