Instead of rewinding video tape ... schedule a digital file!

VideoTizer is a NEW kind of device used by broadcast stations for years. It's called a Digital Playback System. The VideoTizer's scheduling software allows you to play back your video without ever being there. Instead of video tape, VideoTizer stores **over 100 hours** of digital video programs. Record new video content from video, S-Video, cable TV or antenna. The VideoTizer can even play one program while recording a different one.

Instead of rewinding to find the right video...jump to it in less than one second!

While recording or playing a program you can mark important video segments with a beginning and end mark. These marks are called **ClipMarks** and they let you schedule playback of only the segments neccessary, cutting out all unwanted video...all this without ever doing any complicated video editing. Jump to any clip and play it back without ever being there. **Never fast-forward or rewind again**!

In less than 10 minutes you'll learn to use the VideoTizer...

VideoTizer was designed from the start to be **easy to use**. The VideoTizer's remote control is as easy to use as a VCR or DVD player.

The **on-screen menus** are easy to read and understand: the "<u>My</u> <u>Programs"</u> menu for **selecting a program** to play, the "<u>Source</u>" menu for **recording** a video signal, and the <u>Main Menu</u> for tasks such as setup, scheduling, or **saving programs** to an external USB storage device. Got questions? The <u>Help</u> button on the remote brings up instructions right on the screen!

Send video across a network...

Connect VideoTizer to a standard Ethernet network, and your VideoTizer can send files to your desktop or any other VideoTizer on the network. You can **transfer video programs** between units with all the ClipMarks intact. Use one VideoTizer as a playback system, while using another VideoTizer to capture and prepare your video programs.

Once on the network, VideoTizer can be operated from a standard Windows-based PC. The **software** allows you to control, manage and schedule your VideoTizer right from your PC..

Browse for your video on a PC instead of a VCR...

The VideoTizer Browser displays a Windows explorer type"*tree*" of categories, programs and ClipMarks. Quickly rename programs, add descriptions or delete old video programs using your keyboard and mouse. The *Player Control* tool in the Browser lets you interact with the VideoTizer using your PC keyboard as a more powerful remote. Standard dragand-drop operation lets you copy programs or clips between VideoTizers, or you can copy files to or from your PC. Schedule recordings, video playbacks without being there ...

The **VideoTizer Scheduler** lets you set up schedules for playback or recording, all from your PC. Scheduled playback events can occur once or **repeatedly** on selected days of the week. Built-in conflict checking catches scheduling mistakes before they can happen.

Scheduled recording can allow your VideoTizer to archive recurring programming, while scheduled playback turns VideoTizer into a powerful <u>Digital Video Playback</u> <u>System.</u> The possibilities for automated video recording and playback are virtually endless!.

If you use IRIS Technologies' popular Video Commander video and audio routing system, the VideoTizer will fit right in!

Within Video Commander you can make Media Buttons representing particular programs on a VideoTizer; routing from a Media Button automatically starts playback of that program. Video Commander includes a standard VideoTizer control panel, as well as a VideoTizer Keyboard feature for linking your PC keyboard for direct interaction with the VideoTizer.

This integration included provides the same functionality as the *VideoTizer, including program scheduling and drag-and-drop file transfer.*

A unique Schedule Lineup application includes standard support for scheduled playback of programs, as well as device control capabilities including scheduling a named recording. The Add Event Wizard is fully aware of VideoTizer capabilities and steps you through setting up any of these events. You can always add theVideo Commander upgrade later as you grow.
