BRYCETM
Fastener

Tamper-resistant VS Tamperproof

Be aware that security screws fall into two categories: *tamper-resistant* screws and *tamperproof* screws. The distinction is based on the accessibility of the security bits. Torx-pin, hex-pin, socket-pin, drilled-spanners, snake eyes®, Phillips-pin, and Tri-wing have thousands of security bits in circulation that are easily obtainable. This makes these screws tamper-resistant only.

Uniqz® Keyed-Lok® and Penta-Plus™ screws do not have security keys in public circulation and are therefore considered tamperproof screws. With Uniqz® Keyed-Lok® each customer has their own one-of-a-kind socket licensed exclusively to them, making this is a lock-n-key screw™.

Penta-Plus™ is a proprietary drive in which Bryce Fastener controls access to the security keys. The restricted access to the security keys makes these screws theft proof, not just theft-resistant. Consider the security risks associated with your product before you buy!

The Hidden Costs

Consider the cost of the “loss of the valuable product or the cost of a lawsuit” when picking your fastener. Some real life examples:

- ▶ A school of higher learning had some students remove the tamper-resistant security screws and drop a 40 lb rock 10 floors onto a new Mercedes, demolishing the automobile. The cost was \$50,000.
- ▶ A major university had expensive electronics (secured with Torx-pin tamper-resistant screws) stolen from a classroom. The cost was \$30,000.
- ▶ An art museum is sending its Picasso paintings on tour, partially secured with hex-pin security screws. This bit can be purchased at any True Value hardware store. Do you think it is a good idea?
- ▶ A major electronics company does not want anyone adjusting a control mechanism for a motor (there are large liabilities if it does not perform). They chose Keyed-Lok® to avoid tampering. To date, no tampering has occurred.
- ▶ Projection equipment costs \$7,000.00, but is stolen when it is secured with “tamper-resistant screws.”
- ▶ Criminals have security bits smuggled into jails allowing them to hide drugs behind wall plates and even escape.

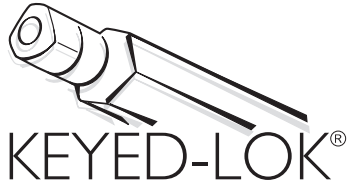

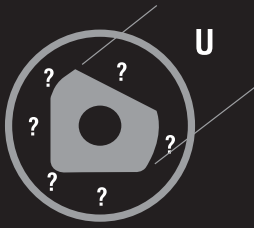

All of these examples have “hidden costs” that far exceed the price of tamperproof screws like Keyed-Lok® and Penta-Plus™. When choosing your security screw, it is important to realize that the security bits are being imported and sold at an alarming rate. Theft-resistant and tamper-resistant screws will only stop the naive.

Can you afford the cost? Choosing a tamperproof product such as Keyed-Lok® or Penta-Plus™, will protect your property — and your investment.

“Hidden Cost” Perspectives on Fasteners

1. Fastener stock maintenance costs are more than the fastener itself. Organizing, monitoring and restocking occupies valuable labor time.
2. The “cost of the twist” to put a screw in is more than the price of the screw. Labor costs to fasten screws far outweigh the screw itself.
3. The “cost of the walk” to get the screw is more than the price of the screw.
4. The “cost of an urgent out” is greater than the price of the fastener. You are always informed of when you are OUT, never when you are LOW. Urgent outs cost extra labor time to replenish, not to mention put a stop to production.
5. The “cost of writing the purchase order” is often higher than the price of the screw. Labor costs in ordering, documenting and follow-up are more than the cost of the fastener.
6. 25 percent of all fasteners are ordered wrong, which causes overstock. Overstock ties up cash and takes up valuable inventory space.
7. A fastener failure can cost your company its existence. Outdated or poor quality fasteners can be devastating if the part fails to perform (see examples on previous page).
8. The cost of a broken fastener in assembly can equal 1000 times the cost of the screw.
9. The time involved in dealing with the nuisance of fasteners could be the most costly of all in that your time could be spent on more important things.

BRYCE FASTEN

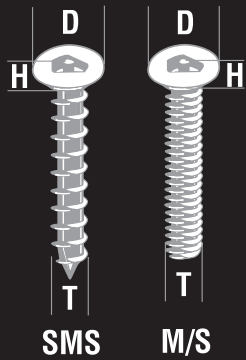

The Key to Security

KEYED-LOK® is a "Lock-n-Key Screw™" that offers a drive key licensed specifically for your application. You own the unique socket/key configuration, insuring controlled key access — the key to tamper-proof screws — and the key to security.

Customer Quotes

"When one of my vendors consistently distinguishes themselves over a period of years with superior service, I feel obligated to let everyone know what it is that makes this company and their employees so extraordinary. That company is Bryce Fastener..."

Ken R. Kinsey
Vice President, SlideRight

"In May 2003, an attempt was made to steal a ceiling mounted projector from one of our classrooms. Cables had been disconnected and a chair was left under the projector. The mount was installed with Bryce security system screws. The assumption is that the thief was foiled in their attempt to remove the projector due to the tamperproof KEYED-LOK® security screws from Bryce Fastener."

Robert Bancroft
Sr. Engineer, Display Systems Technology
Rochester Institute of Technology

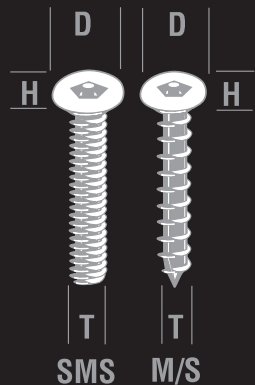

The geometry of Penta-Plus™ makes this an extremely secure screw/bit combination. The bit tips are sold only to the users and are configured to keep Torx and Hex-pins out.

About Bryce

Founded in 1972, Bryce Fastener, Inc. specializes in helping customers in such industries as electronics, construction, corrections and telecommunications solve a wide range of unique and demanding fastener applications. The company's product line ranges from specialized security screws and bolts offering unsurpassed tamper-resistance to fasteners in a wide range of metals.

Services

Bryce Fastener's pro-active approach to fasteners starts with evaluation and recommendation. After reviewing your product and assembly needs, Bryce will suggest a fastener that works the best for you. Our objective is to reduce hidden costs by selecting a fastener that can reduce labor costs in assembly and ordering while improving your product's performance.

Our competent service staff is there to provide support in ordering and follow-up. We make ordering easy and can hold excess custom parts in inventory to reduce lead times. In addition, we provide continual consulting on design changes and product development projects.
