Custom Fiber Jumpers and Cable Assemblies - Standard & Hybrid Styles -

Don't take chances with bad connectors costing you time and money. Order your fiber optic assemblies from Litra Manufacturing and take the worry out of your next project. We offer both single-mode and multi-mode assemblies of any length with a wide range of connector styles, all made in our Georgia facility.

All assemblies are terminated and polished using our own precision techniques and are fully tested prior to packaging. Fiber jumpers are available in simplex, duplex and pigtail styles. Fiber cable assemblies can be made with up to **288** fibers in single or double ended styles, PVC or Plenum jacket. Staggered connectors, job specific breakout lengths and a custom pulling eye can all be specified.

Typical Applications:

- **Telecommunication Networks**
- **Cable TV networks**
- **LAN / WAN**
- **Data centers & Switches**

All connectors used feature quality ceramic connectors and comply with Telcordia standards. Semi-automatic fiber polishing equipment ensures exact connector interface specifications are maintained throughout the production process. All products are 100% optically tested prior to shipping and when required, full interferometer screening for ferrule profile and geometry can be carried out in our own lab.
