

# INTRODUCING

*The New Age in Custom, High Security Screws*

## KEY-REX™

### *Did You Know:*

#### **“Security” Screwdrivers Are Easily Accessible.**

Bit kits containing Torx®-pin, Hex-pin, and other supposedly “secure” bit tips are available at Sears, Napa, Pep Boys, True Value and thousands of wholesale outlets.

The problem is growing. “Tamper-proof” bits are imported every day breaching the security of the Torx®-Pins, Hex-Pins and other “security” screws.

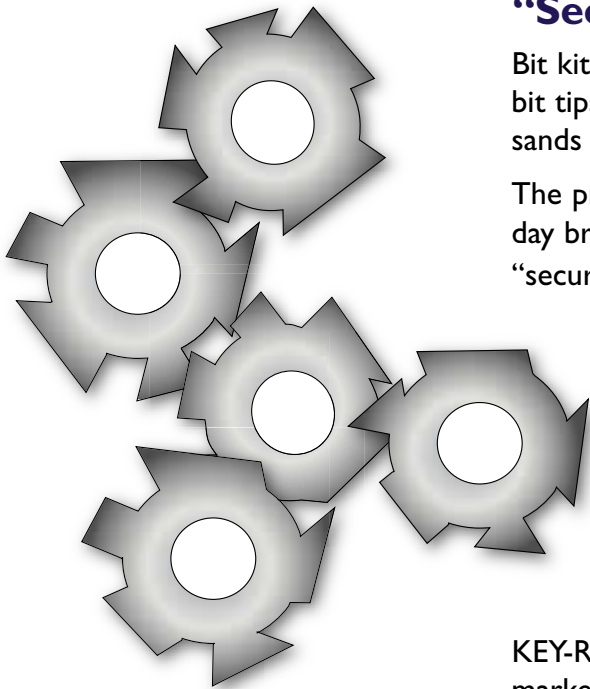

#### **Implications**

Most tamper-resistant screws are obsolete. Users need to reassess their whether their “security” screws are exposing their products to risk.

#### **Solution:**

#### **KEY-REX™ Security Screws.**

KEY-REX™ Security Screws are the only true security screw on the market because each customer has their own unique key design. Bits are produced individually for each key design and only the customer owns the bit — making KEY-REX™ nearly impossible to duplicate. KEY-REX™ provides the ultimate in screw security.

*Millions of Variable Designs*
