

For many people, a simple computer keyboard is like a wall that is impossible to climb. A barrier that isolates them from computing, the web, and a world of information.

It's time to tear down the wall.

introducing the

orbiTouch[®]
keyless keyboard

For some people, using a keyboard and a mouse is a basic everyday task. But for those who have developed repetitive stress injuries, chronic arthritis, have suffered some other hand injury—or who may never have had full use of hands and fingers—using a keyboard is not an option.

And until now, the options that have been available were limited. At one end of the spectrum, ergonomically modified key-based keyboards can be helpful, but still require the ability to use keys. The keyless products available were based on pointers and voice input—removing the keying problem, but limited in function.

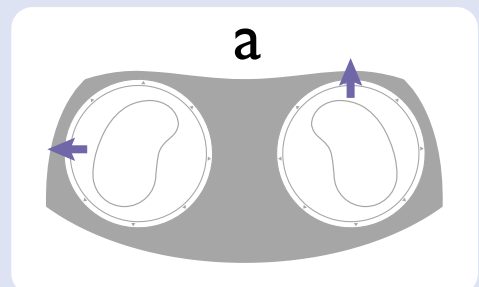

What is needed is a device that truly levels the playing field. An approach to computer interaction that gives the input precision of pressing a key, without the need to press keys.

The orbiTouch Keyless Keyboard™.

The first keyless keyboard with integrated mouse.
Finally, a solution.

How does it work? The easy to use orbiTouch[®] lets you type every letter, number and special character available on a standard keyboard. Each character is identified by moving each of the two ergonomically sculpted domes into a specific position—a position that corresponds to the familiar directions of a compass. For example, as shown below, an "a" is easily typed by moving the left dome "west" and the right dome "north."

No twisting. No keying. No strain. No problem.

How quickly can I learn to use it? Based on ten years of research and backed by multiple patents, the orbiTouch is designed from the ground up for ease of use. If you're familiar with a traditional keyboard, you have already started learning to use the orbiTouch Keyless Keyboard™. The positioning of the orbiTouch[®] domes is intuitive and comfortable for both the experienced and novice typist. This makes learning to use the orbiTouch simple, with basic typing in minutes, and full capability in a few hours. Each orbiTouch[®] is shipped with all the help you'll need for quick proficiency.

orbiTouch® Benefits

- Easy to learn
- Easy to use
- No finger or wrist motion required
- All the precision of pressing a key—with no keys!
- Connects to any IBM-compatible PC without any special programs or drivers
- Provides a “level playing field” for personal productivity, computing, and information access
